

POWER OVER TIME

Lasting Volume and Longevity

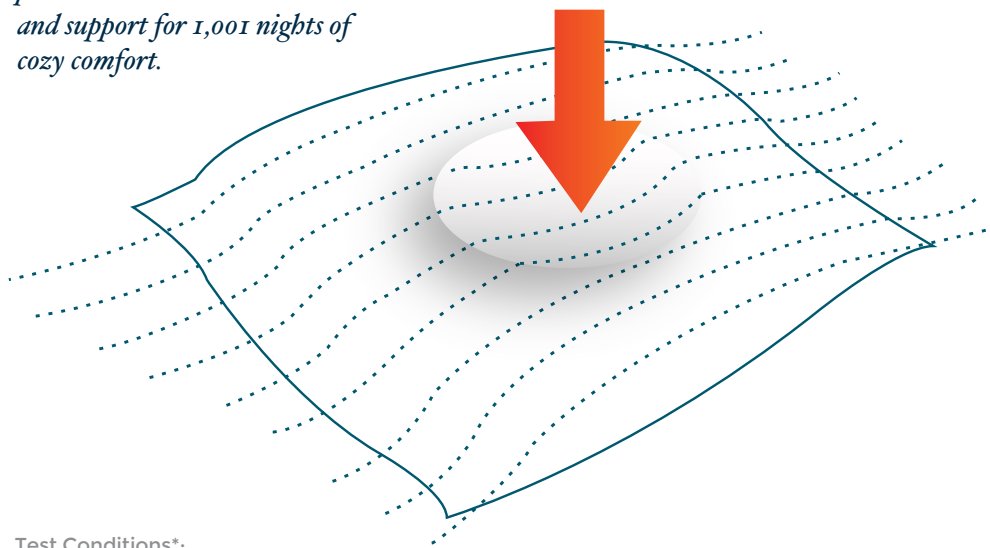

Suprelle® ExtraLife fiber fill is spring-like with 3D helicoidal structure. It is combined with a modified polymer and specially adapted surface finish that give the fiber its outstanding durability and resilience.

Pillows filled with Suprelle® Extralife maintain volume and head support overtime, losing only .2 in of height after 1,001 nights of simulated use.*

The Suprelle® Extralife fiber fill pillow loses +/- 5% bulk after 1,001 nights* of simulated use, whereas other fibers lose up to 25% of their bulk and support. After 1,001 nights* of simulated use, the compression curve of a pillow filled with Suprelle® Extralife fiber hardly changes from new.

Instead of going flat over time, pillows retain the needed bulk and support for 1,001 nights of cozy comfort.

Test Conditions*:
20,000 cycles under 30N compression (as in average head weight) using a 320 cm² disc.
The measurement protocol was based on the principle that standards NF T56-114 and EN ISO 3386-1 combine.

The French Textile Institute (Institut Français du Textile et de l'Habillement) has tested and verified the mechanical endurance of a pillow filled with Suprelle™ Extralife fiber.
