

SUSTAINABLE SUPPORT

Lofty and Supportive Softness

Suprelle® Revive is lofty and resilient, helping you find the right support for a better night's sleep.

This ultra fine microdenier fiber blend allows for more bulk density and volume than traditional down-like fiber filling.

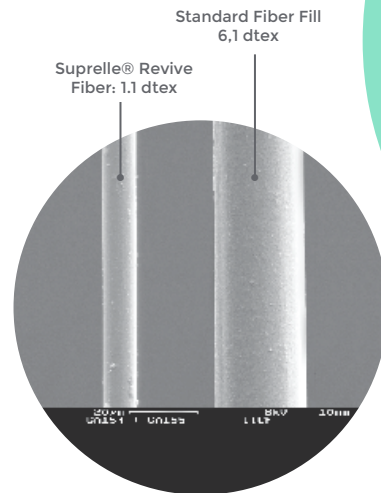

The relative softness test carried out on pillows filled with Suprelle® Revive and PES clusters shows Suprelle® Revive to be 15% softer.*

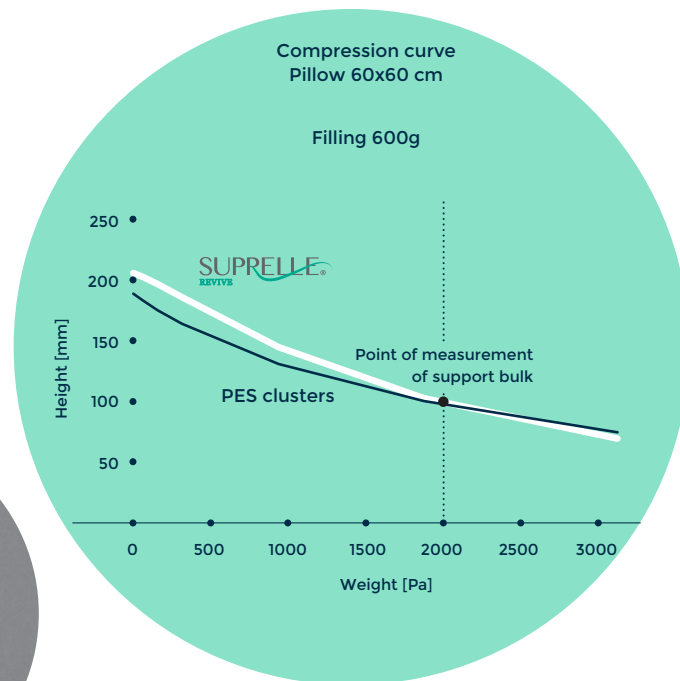

* Relative softness = (initial height-support height) / initial height

Suprelle® Revive is manufactured with our innovative ECO2 Technology. This technology significantly reduces CO2 emissions, land and water use in the manufacturing process of the fibers.

It's six times finer - giving it unparalleled volume, elasticity and density.

Picture taken with an electronic microscope SEM (Scanning Electron Microscope) enlarged 1,000 times.

The Suprelle® Revive compression curve compared to that of PES clusters displays a better initial volume and offers equivalent head and neck support.
