

SOFTNESS THAT PERFORMS

Down-like touch and Recovery

Designed to mimic the unique characteristics of real down, Suprelle® Supreme is soft and resilient. It provides volume and support in pillows while offering outstanding insulation in comforters.

Ultra fine microdenier fibers allow for more density and volume than traditional fiber filling.

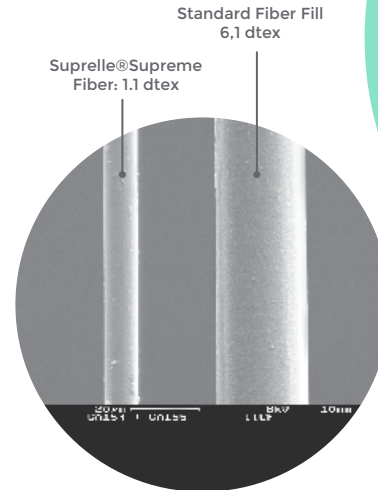

The relative softness test carried out on pillows filled with Suprelle® Supreme and PES clusters shows Suprelle® Supreme to be 15% softer.*

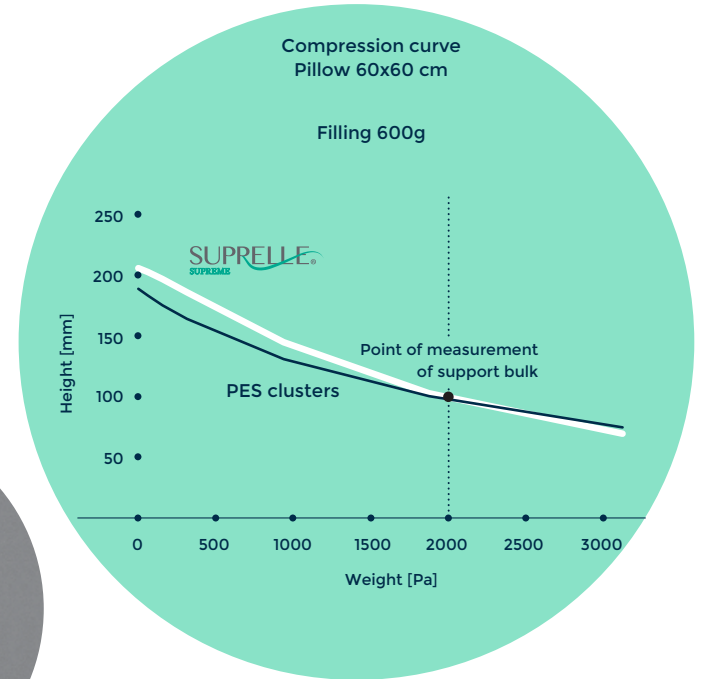

* Relative softness = (initial height-support height) / initial height

Suprelle® Supreme is manufactured with our innovative ECO2 Technology. This technology significantly reduces CO2 emissions, land and water use in the manufacturing process of the fibers.

It's six times finer - giving it unparalleled volume, elasticity and density.

Picture taken with an electronic microscope SEM (Scanning Electron Microscope) enlarged 1,000 times.

The Suprelle® Supreme compression curve compared to that of PES clusters displays a better initial volume and offers equivalent head and neck support.
